

Linux Interface Specification Device Driver I2C

User's Manual: Software

R-Car H3/M3/M3N/E3/D3/V3U/V3H Series

All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corp. without notice. Please review the latest information published by Renesas Electronics Corp. through various means, including the Renesas Electronics Corp. website (http://www.renesas.com).

Notice

- 1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
- 2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
- 3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others
- 4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
- 5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
- Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
 - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.
 - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.

- 7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
- 8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
- 9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
- 10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
- 12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
- 13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
- 14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.
- (Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.
- (Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

How to Use This Manual

• [Readers]

This manual is intended for engineers who develop products which use the R-Car H3/M3/M3N/E3/D3/V3U/V3H processor.

• [Purpose]

This manual is intended to give users an understanding of the functions of the R-Car H3/M3/M3N/E3/D3/V3U/V3H processor device driver and to serve as a reference for developing hardware and software for systems that use this driver.

• [How to Read This Manual]

It is assumed that the readers of this manual have general knowledge in the fields of electrical

- engineering, logic circuits, microcontrollers, and Linux.
 - → Read this manual in the order of the CONTENTS.
- To understand the functions of a multimedia processor for R-Car H3/M3/M3N/E3/D3/V3U/V3H
 - → See the R-Car H3/M3/M3N/E3/D3/V3U/V3H User's Manual.
- To know the electrical specifications of the multimedia processor for R-Car H3/M3/M3N/E3/D3/V3U/V3H
 - → See the R-Car H3/M3/M3N/E3/D3/V3U/V3H Data Sheet.

• [Conventions]

The following symbols are used in this manual.

Data significance: Higher digits on the left and lower digits on the right

Note: Footnote for item marked with Note in the text **Caution**: Information requiring particular attention

Remark: Supplementary information

Numeric representation: Binary ... ××××, 0b××××, or ××××B

Decimal ... ××××

Word ... 32 bits Half word ... 16 bits

Byte ... 8 bits

1. Overview

1.1 Overview

This manual explains the I2C device driver in R-Car H3/M3/M3N/E3/D3/V3U/V3H Linux.

1.2 Function

This module transmits/receives data to/from a device connected to the I2C interface on R-Car H3/M3/M3N/E3/D3/V3U/V3H.

1.2.1 Driver Function

The following table lists the function of this module.

Table 1.2-1 Driver Function

Function	Support status (R-Car H3/M3/M3N/V3U)	Support status (R-Car E3) *1	Support status (R-Car D3)	Support status (R-Car V3H)
Number of channels	7	8	4	6
Channel	Ch0 ~ Ch6	Ch0 ~ Ch6, Ch8	Ch0 ~ Ch3	Ch0 ~ Ch5
Master Mode	Supported			
Slave Mode		Unsupported		
DMA function	Supported (Less than 8 bytes will operate as PIO)			

^(*1) Ch7 for R-Car E3 is used in IIC-DVFS. Please refer to "Power Management user's manual" for detail.

1.2.2 Transfer Speed

The following table shows the transfer speed that this module supports.

Table 1.2-2 Transfer speed (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Interface mode	Real transfer speed	Support
Standard mode (100KHz)	100Kbit/s	yes
Fast mode (400KHz)	400Kbit/s	yes
Fast mode plus (1MHz)	1Mbit/s	yes *1

(*1) Only V3U is supported.

1.2.3 Connected Device

This module connects the following device on R-Car H3-SiP/M3-SiP/M3N-SiP/E3/D3/V3U/V3H System Evaluation Board.

Table 1.2-3 Connected device (R-Car H3/M3/M3N)

1.4 Restrictions

There is no restriction in this module.

1.5 **Notice**

- This module supports the ch2 and ch4 of R-Car H3/M3/M3N on Evaluation board.
- This module supports the ch0 and ch3 of R-Car E3 on Evaluation board.
- This module supports the ch0 and ch1 of R-Car D3 on Evaluation board.
- This module supports the ch0 and ch1 of R-Car V3H on Evaluation board.
- Master transfer support. Slave transfer unsupported.
- Usage note for DMA mode of Receive Operation.

If use DMA mode of Receive Operation more than once with repeated START, issue "STOP condition" and start from beginning of transmission and reception procedure instead of repeated START.

12C2	/dev/i2c-2	89	2
I2C4	/dev/i2c-4	89	4

Table 4.1-2 I2C device node (R-Car E3)

Channel	Device node	Major number	Minor number
I2C0	/dev/i2c-0	89	0
I2C3	/dev/i2c-3	89	3

Table 4.1-3 I2C device node (R-Car D3)

Channel	Device node	Major number	Minor number
I2C0	/dev/i2c-0	89	0
I2C1	/dev/i2c-1	89	1

Table 4.1-4 I2C device node (R-Car V3U)

Channel	Device node	Major number	Minor number
I2C0	/dev/i2c-0	89	0
I2C1	/dev/i2c-1	89	1

Table 4.1-5 I2C device node (R-Car V3H)

Channel	Device node	Major number	Minor number
I2C0	/dev/i2c-0	89	0
I2C1	/dev/i2c-1	89	1

4.2 External Function

This section explains in the following format about the functions this module supplies.

[Overview] Presents an overview of a function.

[Function Name] Explains the name of the function.

[Calling format] Explains the format for calling the function.

[Argument] Explains the argument(s) of the function.

[Return value] Explains the return value(s) of the function.

[Error number] Explains the error number(s) of the function.

[Feature] Explains the features of the function.

[Remark] Explains points to be noted when using the function.

The following table lists the interface functions in this module, and Standard I2C core Interface.

Table 4.2-1 System calls (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Chapter	Function name	Description
4.2.1	open	Open I2C.
4.2.2	close	Close I2C.
4.2.3	read	Read I2C (8bit data is received).
4.2.4	write	Write I2C (8bit data is sent).
4.2.5	ioctl(I2C_RDWR)	Read/Write processing is performed.
4.2.6	ioctl(I2C_FUNCS)	Return the functionality.
4.2.7	ioctl(I2C_SLAVE)	The slave address is changed.
4.2.8	ioctl(I2C_SMBUS)	It receives and transmits data by SMBus system.

Table 4.2-2 Standard I2C device interface (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Chapter	Function name	Description
4.2.9	i2c_new_probed_device	Probe function.
4.2.10	i2c_register_board_info	Register Board Information.
4.2.11	i2c_add_driver	Addition of I2C client driver.
4.2.12	i2c_del_driver	Deletion of I2C client driver.
4.2.13	i2c_master_send	Single(8bit) data transfer (send).
4.2.14	i2c_master_recv	Single(8bit) data transfer (receive).
4.2.15	i2c_transfer	Execute a single or combined I2C message.
4.2.16	i2c_get_functionality	Return the functionality.
4.2.17	i2c_smbus_read_byte	SMBus "receive byte" protocol.
4.2.18	i2c_smbus_write_byte	SMBus "send byte" protocol.
4.2.19	i2c_smbus_read_byte_data	SMBus "read byte" protocol.
4.2.20	i2c_smbus_write_byte_data	SMBus "write byte" protocol.
4.2.21	i2c_smbus_read_word_data	SMBus "read word(16bit)" protocol.
4.2.22	i2c_smbus_write_word_data	SMBus "write word(16bit)" protocol.
4.2.23	i2c_smbus_read_block_data	SMBus "block read" protocol.
4.2.24	i2c_smbus_write_block_data	SMBus "block write" protocol.
4.2.25	i2c_smbus_read_i2c_block_data	SMBus "read block byte" protocol.
4.2.26	i2c_smbus_write_i2c_block_data	SMBus "write block byte" protocol.

4.2.1 open

[Overview] Open I2C

[Function Name] open

[Calling format] #include linux/i2c.h>

#include linux/i2c-dev.h>

int open(const char *device_name, int flags);

[Arguments] device_name Device name (/dev/i2c-X) to open.

flags Open mode.

[Returns] 0 Success

-1 Error

[Feature] Open I2C device.

[Remark] -

4.2.2 close

[Overview] Close I2C

[Function Name] close

[Calling format] #include ux/i2c.h>

#include linux/i2c-dev.h>

int close(int fd);

[Arguments] fd File descriptor

[Returns] 0 Success

-1 Error

[Feature] Close I2C device.

[Remark] -

4.2.3 read

[Overview] Read I2C(8bit data)

[Function Name] read

[Calling format] #include linux/i2c.h>

#include linux/i2c-dev.h>

ssize_t read(int fd, void *buf, size_t count);

[Arguments] fd File descriptor

buf Read data stock area

count Read size

[Returns] Positive value Success (Read size)

1 Erroi

[Feature] Read I2C(8bit data).

[Remark] -

4.2.4 write

[Overview] Write I2C(8bit data)

[Function Name] write

[Calling format] #include linux/i2c.h>

#include linux/i2c-dev.h>

ssize_t write(int fd, const void *buf, size_t count);

[Arguments] fd File descriptor

buf Write data stock area

count Write size

[Returns] Positive value Success (Write size)

-1 Error

[Feature] Write I2C(8bit data).

[Remark] -

4.2.5 ioctl(I2C_RDWR)

[Overview] Read/Write transaction

[Function Name] ioctl(I2C_RDWR)

[Calling format] #include linux/i2c.h>

#include linux/i2c-dev.h>

int ioctl(int fd, I2C_RDWR, struct i2c_rdwr_ioctl_data *msgset);

[Arguments] fd File descriptor

I2C_RDWR Fixed control msgset Send/Receive data

[Returns] 0 Success

-1 Error

[Error number] -EFAULT Bad address

-EINVAL Invalid argument

-ENOMEM There is not enough memory area
-EAGAIN Arbitration lost occurs on I2C bus

-EOPNOTSUPP Operation not supported

-ETIMEDOUT Timeout occurs during I2C device access

-ENXIO NACK occurs on I2C bus

-EBUSY Busy on I2C bus

[Feature] Do read/write transaction without stop.

Only valid if the adapter has I2C_FUNC_I2C.

[Remark] Refer 4.3.6 about i2c_rdwr_ioctl_data structure.

4.2.6 ioctl(I2C_FUNCS)

[Overview] Return the functionality

[Function Name] ioctl(I2C_FUNCS)

[Calling format] #include linux/i2c.h>

#include linux/i2c-dev.h>

int ioctl(int fd, I2C_FUNCS, unsigned long *funcs);

[Arguments] fd File descriptor

I2C_FUNCS Fixed control

funcs The index of function support

[Returns] 0 Success

-1 Error

[Error number] -EFAULT Bad address

[Feature] This function returns whether the function is supported (the command).

Refer to 4.2.16 in detail.

[Remark] -

4.2.7 ioctl(I2C_SLAVE)

[Overview] Change the slave address

[Function Name] ioctl(I2C_SLAVE)

[Calling format] #include linux/i2c.h>

#include linux/i2c-dev.h>

int ioctl(int fd, I2C_SLAVE, long slave);

[Arguments] fd File descriptor

I2C_SLAVE Fixed control slave Slave address

[Returns] 0 Success

-1 Error

[Error number] -EINVAL Invalid argument

-EBUSY Busy on I2C bus

[Feature] Change the slave address.

[Remark] -

4.2.8 ioctl(I2C_SMBUS)

[Overview] Send/Receive data by SMBus system

[Function Name] ioctl(I2C_SMBUS)

[Calling format] #include linux/i2c.h>

#include linux/i2c-dev.h>

int ioctl(int fd, I2C_SMBUS, struct i2c_smbus_ioctl_data *args);

[Arguments] fd File descriptor

I2C_SMBUS Fixed control

args Send/Receive data.

[Returns] 0 Success

-1 Error

[Error number] -EFAULT Bad address

-EINVAL Invalid argument

-EAGAIN Arbitration lost occurs on I2C bus

-ETIMEDOUT Timeout occurs during I2C device access

-ENXIO NACK occurs on I2C bus

-EBUSY Busy on I2C bus

[Feature] SMBus transfer

[Remark] Refer to 4.3.7 about i2c_smbus_ioctl_data structure.

4.2.9 i2c_new_probed_device

[Overview] Probe function

[Function Name] i2c_new_probed_device

[Calling format] #include linux/i2c.h>

struct i2c_client * i2c_new_probed_device(struct i2c_adapter *adap,

struct i2c_board_info *info, unsigned short const *addr_list)

[Arguments] adap Adaptor information.

info Board information. addr_list Address list to probe.

[Returns] Positive Number Success (The pointer to client information)

NULL Error

[Feature] The probe process for the connected device.

[Remark] Refer to the following chapter about i2c_client, i2c_adapter, i2c_board_info structure.

4.3.1 struct i2c_adapter 4.3.2 struct i2c_client 4.3.3 struct i2c_board_info

4.2.10 i2c_register_board_info

[Overview] Register board information

[Function Name] i2c_register_board_info

[Calling format] #include linux/i2c.h>

int __init i2c_register_board_info(int busnum,

struct i2c_board_info const *info, unsigned len);

[Arguments] busnum A number of the bus connected device.

info The vector of I2C device descriptor.
len The number of descriptor included vector.

[Returns] Positive Number Success (A number of the registered board information)

Negative number Error

[Feature] Register board information.

[Remark] This function supports the board dependent part call only.

Refer to 4.3.3 about i2c_board_info structure.

4.2.11 i2c_add_driver

[Overview] Addition of I2C client driver

[Function Name] i2c_add_driver

[Calling format] #include linux/i2c.h>

int i2c_add_driver(struct i2c_driver *driver);

[Arguments] driver The information of client driver.

[Returns] 0 Success

Other value Error

[Feature] Addition of I2C client driver.

[Remark] Refer to 4.3.4 about i2c_driver structure.

4.2.12 i2c_del_driver

[Overview] Deletion of I2C client driver

[Function Name] i2c_del_driver

[Calling format] #include ux/i2c.h>

void i2c_del_driver(struct i2c_driver *driver);

[Arguments] driver The information of client driver.

[Returns] -

[Feature] Deletion of I2C client driver.

[Remark] Refer to 4.3.4 about i2c_driver structure.

4.2.13 i2c_master_send

[Overview] Single(8bit) data transfer in master transmit mode

[Function Name] i2c_master_send

[Calling format] #include linux/i2c.h>

int i2c_master_send(struct i2c_client *client, const char *buf, int count);

[Arguments] client The information of slave device.

buf The data area sent to slave device.

count Sent data size.

[Returns] Positive Number Success (Sent data size)

Negative Number Error

[Feature] Single(8bit) data transfer in master transmit mode.

[Remark] This function cannot be called from the interrupt handler.

4.3.2 struct i2c_client

4.2.14 i2c_master_recv

[Overview] Single(8bit) data transfer in master receive mode

[Function Name] i2c_master_recv

[Calling format] #include linux/i2c.h>

int i2c_master_recv(struct i2c_client *client, char *buf, int count);

[Arguments] client The information of slave device.

buf The data area received from slave device.

count Received data size.

[Returns] Positive Number Success (Received data size)

Negative Number Error

[Feature] Single(8bit) data transfer in master receive mode

[Remark] This function cannot be called from the interrupt handler.

4.2.15 i2c_transfer

[Overview] Execute a single or combined I2C message

[Function Name] i2c_transfer

[Calling format] #include linux/i2c.h>

num

int i2c_transfer(struct i2c_adapter * adap, struct i2c_msg *msgs, int num);

[Arguments] adap The information of I2C bus

msgs One or more messages which will be performed before operation stops

by STOP.

Each message begins with a START.

A number of messages to be executed.

[Returns] Positive Number Success (A number of transmitted messages)

Negative Number Error

[Feature] Execute a single or combined I2C message.

[Remark] This function cannot be called from the interrupt handler.

Refer to the following chapter about i2c_adapter and i2c_msg structure.

4.3.1 struct i2c_adapter 4.3.5 struct i2c_msg

4.2.16 i2c_get_functionality

[Overview] Return the functionality

[Function Name] i2c_get_functionality

[Calling format] #include linux/i2c.h>

u32 i2c_get_functionality(struct i2c_adapter *adap);

[Arguments] adap The information of I2C bus

[Returns] The support information of function (Refer to Table 4.4 in detail)

In the "AND" result of the following bit mask to the return value, "0" is unsupported

function, "1" is support function.

[Feature] Return the functionality.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.1 about i2c_adapter structure.

Table 4.2-3 The support information of function (R-Car H3/M3/M3N/E3/D3/V3U/V3H) (1)

Description Indiana	Bit mask	Function name
Plane I2C command (Not execute in SMBus adapter)	DIT IIIdSK	Function
Plane	0×0000001	I2C_FUNC_I2C

Table 4.2-4 The support information of function (R-Car H3/M3/M3N/E3/D3/V3U/V3H) (2)

Bit mask	Function name
Dit illask	Function
0x00600000	I2C_FUNC_SMBUS_WORD_DATA
0x00000000	SMBus read_word_data and write_word_data command
0x03000000	I2C_FUNC_SMBUS_BLOCK_DATA
0x0300000	SMBus read_block_data and write_block_data command
0x0C000000	I2C_FUNC_SMBUS_I2C_BLOCK
0.0000000	SMBus read_i2c_block_data and write_i2c_block_data command
0x02FF0008	I2C_FUNC_SMBUS_EMUL
	All SMBus commands that can be emulated by a real I2C adapter (using the transparent emulation layer)

4.2.17 i2c_smbus_read_byte

[Overview] SMBus "receive byte" protocol

[Function Name] i2c_smbus_read_byte

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_read_byte(struct i2c_client *client);

[Arguments] client The information of slave device.

[Returns] Positive Number Success (Received data size)

Negative Number Error

[Feature] SMBus "receive byte" protocol.

Without specifying a register of a device, this function is received 8 bits.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.2 about i2c_client.

4.2.18 i2c_smbus_write_byte

[Overview] Single(8bit) "send byte" protocol

[Function Name] i2c_smbus_write_byte

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_write_byte(struct i2c_client *client, u8 value);

[Arguments] client The information of slave device.

value Sent data size

[Returns] 0 Success

Negative Number Error

[Feature] SMBus "send byte" protocol.

Without specifying a register of a device, this function is sent 8 bits.

[Remark] This function cannot be called from the interrupt handler.

4.2.19 i2c_smbus_read_byte_data

[Overview] SMBus "read byte" protocol

[Function Name] i2c_smbus_read_byte_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_read_byte_data(struct i2c_client *client, u8 command);

[Arguments] client The information of slave device.

command The command interpreted by slave.

[Returns] Positive Number Success (Read data size)

Negative Number Error

[Feature] This function is received 8 bits data from the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.2 about i2c_client.

4.2.20 i2c_smbus_write_byte_data

[Overview] SMBus "write byte" protocol

[Function Name] i2c_smbus_write_byte_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_write_byte_data(struct i2c_client *client, u8 command, u8 value);

[Arguments] client The information of slave device.

command The command interpreted by slave.

value Write data size

[Returns] 0 Success

Negative Number Error

[Feature] This function is sent 8 bits data to the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

4.2.21 i2c_smbus_read_word_data

[Overview] SMBus "read word(16bit)" protocol

[Function Name] i2c_smbus_read_word_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_read_word_data(struct i2c_client *client, u8 command);

[Arguments] client The information of slave device.

command The command interpreted by slave.

[Returns] Positive Number Success (Read data size(16bit unsigned word))

Negative Number Error

[Feature] This function is received 16 bits data from the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.2 about i2c_client.

4.2.22 i2c_smbus_write_word_data

[Overview] SMBus "write word(16bit)" protocol

[Function Name] i2c_smbus_write_word_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_write_word_data(struct i2c_client *client, u8 command, u16 value);

[Arguments] client The information of slave device.

command The command interpreted by slave.

value Write data size (16bit word)

[Returns] 0 Success

Negative Number Error

[Feature] This function is sent 16 bits data to the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

4.2.23 i2c_smbus_read_block_data

[Overview] SMBus "block read" protocol

[Function Name] i2c_smbus_read_block_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_read_block_data(struct i2c_client *client, u8 command, u8 *values);

[Arguments] client The information of slave device.

command The command interpreted by slave. values The pointer to store read data.

[Returns] Positive Number Success (Read data block size)

Negative Number Error

[Feature] This function is received data block from the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.2 about i2c_client.

4.2.24 i2c_smbus_write_block_data

[Overview] SMBus "block write" protocol

[Function Name] i2c_smbus_write_block_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_write_block_data(struct i2c_client *client, u8 command,

u8 length, const u8 *values);

[Arguments] client The information of slave device.

command The command interpreted by slave.

length Data block size.

value The pointer to store write data.

[Returns] 0 Success

Negative Number Error

[Feature] This function is sent data block to the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.2 about i2c_client.

4.2.25 i2c_smbus_read_i2c_block_data

[Overview] SMBus "read block byte" protocol

[Function Name] i2c_smbus_read_i2c_block_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_read_i2c_block_data(struct i2c_client *client, u8 command,

u8 length, u8 *values);

[Arguments] client The information of slave device.

command The command interpreted by slave.

length Data block size.

values The pointer to store read data.

[Returns] Positive Number Success (Read data size)

Negative Number Error

[Feature] This function is received data block from the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.2 about i2c_client.

4.2.26 i2c_smbus_write_i2c_block_data

[Overview] SMBus "write block byte" protocol

[Function Name] i2c_smbus_write_i2c_block_data

[Calling format] #include linux/i2c.h>

s32 i2c_smbus_write_i2c_block_data(struct i2c_client *client, u8 command,

u8 length, const u8 *values);

[Arguments] client The information of slave device.

command The command interpreted by slave.

length Data block size.

value The pointer to store write data.

[Returns] 0 Success (Write data size)

Negative Number Error

[Feature] This function is sent data block to the specified register of a device.

[Remark] This function cannot be called from the interrupt handler.

Refer to 4.3.2 about i2c_client.

4.3 Structure

Structure of this module is based on Linux v5.10.41

4.3.1 struct i2c_adapter

Table 4.3-1 struct i2c_adapter (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Structure	Member			
name	Туре	Member name	Overview	
	struct module *	owner	The owner of this module	
	unsigned int	class	The type of I2C device supported by this driver	
	const struct i2c_algorithm *	algo	The pointer of the algorithm to access the bus	
	void *	algo_data	The algorithm data	
	const struct i2c_lock_operations*	lock_ops	Lock operations	
	struct rt_mutex	bus_lock	The structure specified rt_mutex	
	struct rt_mutex	mux_lock	The structure specified rt_mutex	
	int	timeout	Timeout value	
	int	retries	The retry number	
	struct device	dev	The adapter device	
i2c_adapter	unsigned long	locked_flags	owned by the I2C core	
	int	nr	The adapter ID	
	char	name[48]	The name of I2C device driver	
	struct completion	dev_released	The structure used to maintain the state of "completion"	
	struct mutex	userspace_clients_lock	The mutex of client	
	struct list_head	userspace_clients	The list of client	
	struct i2c_bus_recovery_info *	bus_recovery_info	The pointer of the information for bus recovery	
	const struct i2c_adapter_quirks *	quirks	describe flaws of the i2c adapter	
	struct irq_domain *	host_notify_domain	Recovery	

4.3.2 struct i2c_client

Table 4.3-2 struct i2c_client (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Structure	Member			
name	Туре	Member name	Overview	
	unsigned short	flags	The support function flag of client	
	unsigned short	addr	The slave address	
	char	name[I2C_NAME_SIZE]	The client name	
i2c client	struct i2c_adapter *	adapter	The adapter information	
izc_client	struct device	dev	The driver model device node for the slave	
	int	init_irq	irq set at initialization	
	int	irq	The interrupt number used by the device	
	struct list_head	detected	The member of i2c_driver.clients list	

4.3.3 struct i2c_board_info

Table 4.3-3 struct i2c_board_info (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Structure		Member		
name	Туре	Member name	Overview	
	char	type[I2C_NAME_SIZE]	The chip type to initialize i2c_client.name	
	unsigned short	flags	The flag to initialize i2c_client.flags	
	unsigned short	addr	The device address	
	const char *	dev_name	The device name	
	void *	platform_data	The Platform Data of the device	
i2c board info	struct device_node *	of_node	The information of the device node	
	struct fwnode_handle *	fwnode	Device node supplied by the platform firmware	
	const struct property_entry *	properties	Additional device properties for the device	
	const struct resource *	resources	Resources associated with the device	
	unsigned int	num_resources	Number of resources in the @resources array	
	int	irq	The interrupt number used by the device	

4.3.4 struct i2c_driver

Table 4.3-4 struct i2c_driver (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Structure	Member				
name	Туре	Member name	Overview		
	unsigned int	class	The kind of the I2C device created the instance		
	int (*probe)(struct i2c_client *, const struct i2c_device_id *)	probe	Callback for device binding		
	int (*remove)(struct i2c_client *)	remove	Callback for device unbinding		
	int (*probe_new)(struct i2c_client *)	probe_new	Callback for device probing		
	void (*shutdown)(struct i2c_client *)	shutdown	Callback for device shutdown		
	void (*alert)(struct i2c_client *, enum i2c_alert_protocol protocol, unsigned int data)	alert	Alert callback		
i2c_driver	int (*command)(struct i2c_client *client, unsigned int cmd, void *arg)	command	Callback for bus-wide signaling (optional)		
	struct device_driver	driver	The device driver structure		
	const struct i2c_device_id *	id_table	List of I2C devices supported by this driver		
	int (*detect)(struct i2c_client *, struct i2c_board_info *)	detect	Callback for device detection		
	const unsigned short *	address_list	The I2C addresses to probe (for detect)		
	struct list_head	clients	List of detected clients we created (for i2c-core use only)		

4.3.5 struct i2c_msg

Table 4.3-5 struct i2c_msg (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Structure	Member			
name	Туре	Member name	Overview	
	u16	addr	The slave address	
i2a maa	u16	flags	Specify R/W flag	
i2c_msg	u16	len	The message length	
	u8*	buf	The pointer to the message data	

4.3.6 struct i2c_rdwr_ioctl_data

Table 4.3-6 struct i2c_rdwr_ioctl_data (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Structure	Member		
name	Туре	Member name	Overview
i2c_rdwr_ioctl_data	struct i2c_msg *	msgs	The pointer to i2c_msg structure
120_IdWI_IOCII_data	u32	nmsgs	A number of i2c_msg

4.3.7 struct i2c_smbus_ioctl_data

Table 4.3-7 struct i2c_smbus_ioctl_data (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Structure	Member			
name	Туре	Member name	Overview	
	u8	read_write	Specify R/W flag	
i2c_smbus_ioctl_data	u8	command	The slave address	
izc_silibus_locti_data	u32	size	Data type (size)	
	union i2c_smbus_data *	data	The pointer to the data	

4.3.8 union i2c_smbus_data

Table 4.3-8 union i2c_smbus_data (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Union	Member			
name	Туре	Member name	Overview	
i2c_smbus_data	u8	byte	8bit data buffer	
	u16	word	16bit data buffer	
	u8	block[I2C_SMBUS_BLOCK_MAX + 2]	Block data buffer	

4.4 Global Variables and Constants

4.4.1 Global Variables

There are no global variables for this module.

4.4.2 Global Constants

The following table shows the global constants used by standard I2C core.

Table 4.4-1 List of Global constants (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Global Constant Name	Value	Remark
I2C_CLIENT_END	0xfffeU	-
I2C_CLIENT_PEC	0x04	-
I2C_CLIENT_TEN	0x10	-
I2C_CLIENT_WAKE	0x80	-
I2C_FUNC_SMBUS_QUICK	0x00010000	-
I2C_FUNC_SMBUS_READ_BYTE	0x00020000	-
I2C_MODULE_PREFIX	"i2c:"	-
I2C_M_RD	0x0001	-
I2C_M_RECV_LEN	0x0400	-
I2C_M_TEN	0x0010	-
I2C_NAME_SIZE	20	-
I2C_SMBUS_BYTE	1	-
I2C_SMBUS_BYTE_DATA	2	-
I2C_SMBUS_BLOCK_DATA	5	-
I2C_SMBUS_BLOCK_MAX	32	-
I2C_SMBUS_BLOCK_PROC_CALL	7	-
I2C_SMBUS_I2C_BLOCK_DATA	8	-
I2C_SMBUS_PROC_CALL	4	-
I2C_SMBUS_QUICK	0	-
I2C_SMBUS_READ	1	-
I2C_SMBUS_WRITE	0	-
I2C_SMBUS_WORD_DATA	3	-
I2C_RDWR	0x0707	-
I2C_FUNCS	0x0705	-
I2C_SLAVE	0x0703	-
I2C_SMBUS	0x0720	-

5. Integration

5. Integration

5.1 Directory Configuration

The directory configuration is shown below.

Figure 5-1 Directory configuration (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

5.2 Integration Procedure

To enable the function of this module, make the following setting with Kernel Configuration.

```
Device Drivers --->
-*- I2C support --->
<*> I2C device interface
I2C Hardware Bus support --->
<*> Renesas R-Car I2C Controller
```

Figure 5-2 Kernel configuration (R-Car H3/M3/M3N/E3/D3/V3U/V3H)

5.3 Option Setting

5.3.1 Module Parameters

5.3.1.1 DT

When operation is in master mode, the SCL clock ratio is generated from an internal clock. The following equation is used.

```
SCL freq = I2Cck/(20 + SCGD \times 8 + F[(tICF + tr + IntDelay) \times I2Cck]) \\ I2Cck: I2C internal clock frequency (133.33MHz[R-Car H3/M3/M3N/E3/D3/V3U/V3H]) \\ SCGD: SCL Clock Generation Divider (Calculated by the driver) \\ F[n]: n rounded down to an integer
```

Table 5.3-1 Device Tree and Formula Parameter(R-Car H3/M3/M3N/E3/D3/V3U/V3H)

Device Tree property	Formula Parameter	Description	Default value
clock-frequency	SCLfreq	Frequency of bus clock in Hz	100000
i2c-scl-rising-time-ns	tr	I2C SCL rising time (depending on external load)	200
i2c-scl-falling-time-ns	tICF	I2C SCL falling time (depending on external load)	35
i2c-scl-internal-delay-ns	IntDelay	LSI internal delay corresponds to output buffer type.	50

Please set I2C transfer speed 400000 or 100000 to "clock-frequency" of device tree file (salvator-common.dtsi) in arch/arm64/boot/dts/renesas directory. No setting means 100000 Hz.

```
&i2c2 {
    status = "okay";
    clock-frequency = <100000>;
    ...
}

&i2c4 {
    status = "okay";
    clock-frequency = <400000>;
    ...
}
```

Figure 5-3 Example of setting I2C transfer speed (R-Car H3/M3/M3N)

I2C0, I2C3, I2C4 and I2C5 have Open drain buffer.

Their IntDelay are set 110ns in arch/arm64/boot/dts/renesas/r8a7795.dtsi, r8a7796.dtsi, r8a77965.dtsi.

I2C1, I2C2 and I2C6 have LVTTL (low drive only) buffer.

Their IntDelay are set 6 ns in arch/arm64/boot/dts/renesas/r8a7795.dtsi, r8a7796.dtsi, r8a77965.dtsi.

Please set I2C transfer speed 400000 or 100000 to "clock-frequency" of device tree file (r8a77990-ebisu.dts, r8a77990-es10-ebisu.dts) in arch/arm64/boot/dts/renesas directory. No setting means 100000 Hz.

```
&i2c0 {
    status = "okay";
    clock-frequency = <400000>;
    ...
}

&i2c3 {
    status = "okay";
    clock-frequency = <100000>;
    ...
}
```

Figure 5-4 Example of setting I2C transfer speed (R-Car E3)

I2C0, I2C3 have Open drain buffer.

Their IntDelay are set 110ns in arch/arm64/boot/dts/renesas/r8a77990.dtsi.

I2C1, I2C2, I2C4, I2C5, I2C6 and I2C8 have LVTTL (low drive only) buffer.

Their IntDelay are set 6ns in arch/arm64/boot/dts/renesas/r8a77990.dtsi.

Please set I2C transfer speed 400000 or 100000 to "clock-frequency" of device tree file (r8a77995-draak.dts) in arch/arm64/boot/dts/renesas directory. No setting means 100000 Hz.

```
&i2c0 {
    status = "okay";
    clock-frequency = <400000>;
    ...
}

&i2c1 {
    status = "okay";
    clock-frequency = <100000>;
    ...
}
```

Figure 5-5 Example of setting I2C transfer speed (R-Car D3)

I2C0, I2C1, I2C2 and I2C3 have LVTTL (low drive only) buffer. Their IntDelay are set 6ns in arch/arm64/boot/dts/renesas/r8a77995.dtsi.

Please set I2C transfer speed 400000 or 100000 to "clock-frequency" of device tree file (r8a779a0-falcon.dts) in arch/arm64/boot/dts/renesas directory. No setting means 100000 Hz.

```
&i2c0 {
    status = "okay";
    clock-frequency = <400000>;
    ...
}

&i2c1 {
    status = "okay";
    clock-frequency = <100000>;
    ...
}
```

Figure 5-6 Example of setting I2C transfer speed (R-Car V3U)

Please set I2C transfer speed 400000 or 100000 to "clock-frequency" of device tree file (r8a77980-condor.dts) in arch/arm64/boot/dts/renesas directory. No setting means 100000 Hz.

```
&i2c0 {
        status = "okay";
        clock-frequency = <400000>;
        ...
}

&i2c1 {
        status = "okay";
        clock-frequency = <100000>;
        ...
}
```

Figure 5.7 Example of setting I2C transfer speed (R-Car V3H)

 $I2C0,\,I2C1,\,I2C2,\,I2C3,\,I2C4\,\,and\,\,I2C5\,\,have\,\,LVTTL\,\,(low\,\,drive\,\,only)\,\,buffer.$

Their IntDelay are set 6ns in arch/arm64/boot/dts/renesas/r8a77980.dtsi

5.3.1.2 Multi-master

If there is another master on I2C bus, a clock should always be supplied. Please set "multi-master" of device tree file (salvator-common.dtsi, r8a77990-ebisu.dts, r8a77990-es10-ebisu.dts, r8a77995-draak.dts, r8a779a0-falcon.dts, r8a77980-condor.dts, …) in arch/arm64/boot/dts/renesas directory.

Device Tree property	Description	Remark
multi-master	Support the multi-master	A clock should always be supplied when multi-master to keep arbitration working.

5.3.2 Kernel Parameters

There are no module parameters.

REVISION HISTORY	Linux Interface Specification Device Driver I2C
KE VISION TIISTORT	User's Manual: Software

	Date		Description				
		Page	Summary				
0.1 N	Nov. 20, 2015	_	New creation.				
0.2	Mar 19 2016	2	Table 1.2 Connected device (R-Car H3)				
0.2	Mar. 18, 2016		Add Max SCL Clock Frequency.				
		26	4.3 Structure				
		20	Modify the Linux version.(4.2 -> 4.4)				
		31	Add "5.3.1.1 DT" and "5.3.1.2 Multi-muster" section.				
		31	Figure 5.4 Example of setting I2C transfer speed (R-Car H3)				
			Modify the "clock-frequency" value of I2C2. (400000 -> 100000)				
0.3 A	Apr, 15, 2016	All	Add R-Car M3 support.				
		3	1.3.2 Related Documents				
			Update related documents.				
		31	5.3 Option Setting				
			Add R-Car M3 Device tree file(r8a7796.dtsi).				
0.4	Aug.5.2016	1	Add "1.2-1 Driver Function" section and Table 1.2.1.				
			Table 1.3-2 Related Documents				
			- H3 Document Update.				
		3	- Add M3 Document.				
			1.5 Notice				
			Delete "DMA Unsupport".				
		31	5.3.1.1 DT				
			The explanation of F[n] is corrected.				
0.5	Dec. 16, 2016	31	5.3.1.1 DT				
0.5			5.3.1.2 Multi-master Change R-Car H3 device tree file name(r8a7795.dtsi, r8a7795-salvator-x.dts)				
			1.2.3 Connected Device				
0.6	Mar. 15, 2017	2, 6	3.2 Module Configuration				
0.0			Fix "H3/M3 Solution Board" to "H3-Sip/M3-Sip System Evaluation Board".				
		3	1.3.2 Related Documents				
			Add User's Manual: Hardware Rev0.53.				
		30	Figure 5.1 Directory configuration (R-Car H3/M3)				
			File i2c.h has been abolished by rebasing the kernel.				
		21	5.3.1.1 DT				
			5.3.1.2 Multi-master				
		31	Add R-Car H3 device tree file name(r8a7795.dtsi, r8a7795-salvator-x.dts, r8a7795-salvator-xs.dts)				
0.7 J	Jun. 14, 2017	3	Update User's Manual: Hardware Rev0.53 to Rev0.54.				
1.00	Aug. 8, 2017	All	Update document format.				

Rev.	Date	Description			
		Page	Summary		
1.01	Oct. 24, 2017	All	Add R-Car M3N support.		
		1	Table 1.2 1 Driver Function		
		1	Add notice for DMA function.		
		3	1.5 Notice		
			Add Usage note for DMA mode of Receive Operation.		
		31	5.3.1.2 Multi-master
